Proposed Solution for Freelance Finder

S. No.	Parameter	Description
1	Problem Statement (Problem to be solved)	1. Modern readers struggle to find books easily due to poor search systems, limited filtering options, and scattered book platforms. 2. Admin-facing issues include manual book management, outdated inventory tools, and difficulty updating categories and stock. 3. Users also face lack of trustworthy reviews, poor UI experiences, and no unified place to wishlist or purchase books smoothly.
2	Idea / Solution Description	The Online Bookstore is a MERN-based full-stack application enabling users to browse, search, filter, review, wishlist, and purchase books effortlessly.
3	Novelty / Uniqueness	• Highly optimized search & multi-filter system • Separate user & admin dashboards • Modern, responsive UI with Tailwind CSS • Scalable backend with role-based access
4	Social Impact / Customer Satisfaction	• Makes reading more accessible and enjoyable • Encourages book buying through smooth user experience • Helps small vendors or publishers display and sell books online • User reviews improve transparency and buying confidence • Reduces dependency on physical bookstores and provides 24/7 access
5	Business Model (Revenue Model)	• Commission on each book sold • Premium membership for early access, discounts, or recommendations • advertisement placements for new book releases
6	Scalability of the Solution	• Expandable to large catalogs with thousands of books • Multi-language and multi-currency support for future expansion • Mobile app upgrade possible using React Native • Modular architecture enables quick integration of AI-based search, payment gateways, or audiobook support in future
